Instructions:

Print out this blank BINGO paper, one for each student. More can be printed if they wish. Each student creates their own math problems in each of the 24 blank squares.

The answer to each problem has to be between 0 and 50, no more, no less!!

The first column must contain addition problems; the second column, subtraction problems; etc. The "freestyle" column can be any math type (algebra, exponents, etc.).

Bring the BINGO sheet(s) to math class on Thursday, Oct. 28, for our holiday festivities.
